2009

OZONE DESIGN INNOVATION HISTORY

2002:

We released the Worlds 1st Depowerable "open-cell" foil.

We invented a ground breaking Speed system design that allowed the angle of attack to change drastically on an open cell foil.

2004:

We invented the "Re-Ride Leash-less" safety system. This excellent design innovation was a breakthrough for the safety of kites. The easy to grab handle below the De-power Trimmer allowed the rider to kill the power with ease. Since copied by other brands making De-power foils.

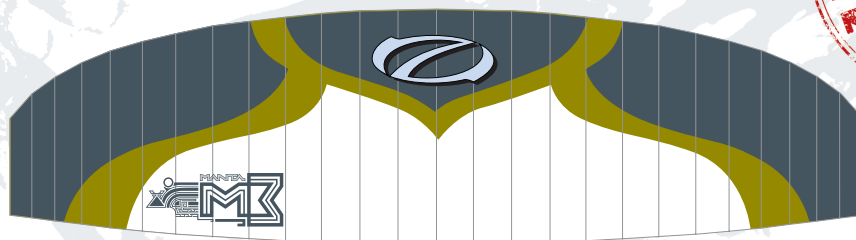

2007:

Y-Line design: 3 x 25m lines from bar splitting to 4 at kite (500 kg and 300kg coloured lines). This reduces drag and reduces line tangles/hassle.

Other brands have copied this excellent invention and even call it the same name!

2009:

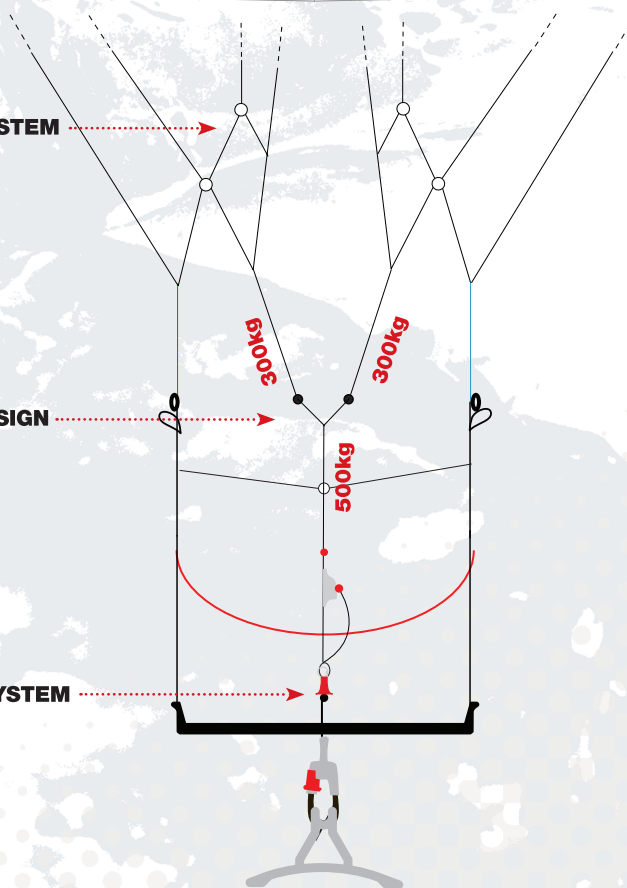

We refined the original Re-Ride safety system from 04/05 and this time have Patent Pending!
